## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-3 are rejected under 35 U.S.C. 102(e) as being anticipated by

Takeshita et al (6521370).

Takeshita et al disclose a battery pack and battery loading device. See abstract.

Figures 4-6 show the battery pack 5 and a battery receiving housing 6. The

battery pack 5 is shown to have terminal connections 21-23, control recesses 28

and 29 and control grooves 37 on one end of the battery and guide grooves 26

on the two edges of the battery with these guide grooves being in the bottom side

portion of the battery. The battery is engaged into the battery receiving housing,

wherein the terminals 21-23 of the battery are engaged with those of the

receiving housing terminals 51-53. Protruding portions 65, 66, 72, 73, 74, 47 and

79 are all engaged with the recesses of the battery pack 5 wherein these

features as shown by way of Fig. 6, show that these projections are mounted on

inner walls of the receiving housing. See also col. 5, line 8 – col. 9, line 56.

Art Unit: 1746

The prior art of Takeshita et al anticipates the applicants' instant invention as set forth in the claims since each structural aspect of the instant claims has been found in the patent as shown and set forth above.
